```
    Cout << "Leap Year" << endl;
else
    Cout << "Not Leap Year" << endl;

return 0;
}
```

Q) WAP to Check if a given number is divisible by 7 & 5.

```
#include <iostream>
using namespace std;
int main() {
        int num;
        cin >> num;
        if (num % 7 == 0  && num % 5 == 0)
                Cout << "Divisible" << endl;

        else
            cout << "Not Divisible" << endl;
        return 0;
    }
```

• LOOPS:-

Q) WAP to print numbers from 1 to n.

```
#include <iostream>
using namespace std;

int main() {
        int n;
        Cin >> n;
        for (int i = 1; i <= n; i++) {
                Cout << i << endl;
        }
        return 0;
    }
```

Q) WAP to print all even numbers between 1 to n.

```
#include <iostream>
using namespace std;
int main() {
        int n;
        cin >> n;
        for (int i=2; i<=n; i++) {
                if (i%2==0)
                        cout << i << endl;
        }
        return 0;
}
```

Q) WAP to find the sum of first n natural numbers.

```
#include <iostream>
using namespace std;
int main() {
        int n;   int sum=0;
        cin >> n;
        for (int i=1, i<= n; i++) {
                sum += i;
        }
        cout << sum << endl;
        return 0;
}
```

Before using sum variable you should initialize it with 0.

Q) WAP to check for prime number

```
#include <iostream>
using namespace std;
int main() {
        int num;   int count=0;
        cin >> num;
        if (num <2) {  cout << "Not Prime" << endl;
              return 0; }
```

Scanned with OKEN Scanner

```
else {
    for (int i=2; i<num; i++) {
        if (num % i == 0) {
            Count = 1;
            break;
        }
    }
    if (count != 0)
        cout << "Not Prime" << endl;
    else
        cout << "Prime" << endl;
    return 0;
}
```

If break is used, it exits loop permanently

Q> WAP to print the following Fibonacci Series till n terms :-

0 1 1 2 3 5 13 21 34

```
#include <iostream>
using namespace std;
int main() {
    int first=0 , Second= 1, Current , n;
    cout << "Enter number of terms: ";
    cin >> n;
    if (n >=1)
        cout << first << " ";
    if (n>= 2)
        cout << Second << " ";
    for (int i= 3; i<=n; i++) {
        Current = first + Second;
        first = Second;
        Second = Current
        cout << Current << " "; }
    return 0;
}
```
